AI use cases for law firms

- AI assistant: Allow clients to directly view available time slots and book consultations without back-and-forth emails or calls and use AI to pre-screen and collect information from new clients, saving lawyers' time.

- AI OCR (Optical Character Recognition): Convert scanned legal documents, handwritten notes, or PDFs into searchable, editable text for faster analysis and filing. Quickly scan thousands of emails or documents to find evidence or privileged information.

- Legal research automation: AI can quickly find relevant laws, precedents, and cases based on specific case facts or queries.
